

# Assembling the solar power generator

Here are three charge options for your solar-powered portable generator. Charging with solar panels. The main point of solar power generators is to be able to recharge the unit via the sun. So, the most common way to charge a solar generator is through solar panels. The panels convert the energy from the sun into electricity.

Solar powered generators are quiet and ideal for camping or boating trips. They're usually easier to maintain than fossil fuel-powered generators. They can be expensive, and don't always have a high power output. With all the environmental issues the world continues to face, going solar is becoming a must.

Backup solar generators can typically power at least 1,000 watts, which should be enough to power appliances like small lights, a fridge, or a television. However, if you need whole-home power or need to turn on devices like a washing machine or air-conditioning unit, you will likely need a generator with a power level of at least 2,000-3,000 watts.
