

Liquid cooling provides up to 3500 times the efficiency of air cooling, resulting in saving up to 40% of energy; liquid cooling without a blower reduces noise levels and is more compact in the battery pack [122]. Pesaran et al. [123] noticed the importance of BTMS for EVs and hybrid electric vehicles (HEVs) early in this century.

In 2022, the energy storage industry will develop vigorously, and the cumulative installed capacity of new energy storage will reach 13.1GW. The number of new energy storage projects planned and under construction in China has reached nearly 100GW, which has greatly exceeded the scale expectation of 30GW in 2025 put forward by relevant national departments.
