Pump efficiency: This metric evaluates how effectively a pump converts solar energy into hydraulic energy, with a higher percentage signifying better performance. Solar panel wattage: The size and number of solar panels determine the power available to drive the pump, closely linked to the pump's electrical requirements.

Our Ip-based solar farm CCTV systems manage and deal with a range of security threats. Solar panel theft causes disruption to day-to-day operations, loss of revenue and operational continuity. Well-placed IP CCTV cameras offering superior night vision will watch over your panels providing crystal clear footage.

Under typical UK conditions, 1m² of PV panel will produce around 100kWh electricity per year, so it would take around 2.5 years to "pay back" the energy cost of the panel. PV panels have an expected life of least 25 to 30 years, so even under UK conditions a PV panel will generate many times more energy than was needed to manufacture it.
