Hydrogen storage systems based on the P2G2P cycle differ from systems based on other chemical sources with a relatively low efficiency of 50-70%, but this fact is fully compensated by the possibility of long-term energy storage, making these systems equal in capabilities to pumped storage power plants.

The new economics of energy storage | McKinsey. Our research shows considerable near-term potential for stationary energy storage. One reason for this is that costs are falling and could be \$200 per kilowatt-hour in 2020, half today's price, and \$160 per kilowatt-hour or less in 2025.
