Are vacuum circuit breakers qualified as generator circuit breaker (GCBs)?

Circuit breakers employing vacuum technology fulfil all defined requirements be qualified as Generator Circuit Breakers (GCBs) according to the above mentioned standards.

What was the first vacuum circuit breaker?

By the mid-1960s,General Electric (GE) Corporation (USA) developed a 15 kV/1.2-12 kAvacuum circuit breaker (VCB) which was the first VCB product worldwide. At the same period,Xi'an Jiaotong University developed the first three-phase vacuum switch in China in 1965,which was with 10 kV and 1500 A.

Does a modular FVCB have a short-circuit current interruption performance?

The short-circuit current interruption performance of the FVCB was validated using terminal fault test duty T100s (b) for a modular 72.5 kV FVCB at the National Quality Supervision &Inspection Center for High Voltage Apparatus. A test current of 80 kA was successfully interrupted against a recovery voltage of 126 kV in peak.

In vacuum circuit breakers, vacuum typically at pressures ranging from 10-9 to 10-6 bar is used as the quenching medium. At such pressures, high dielectric strength can be achieved. The contact separation needed at such low pressures is only 0-20 mm and low energy mechanisms may be employed to operate the contacts through expendables bellows.
