

# Can people live in the bedroom under the photovoltaic panels

Can you install solar panels if you live in a flat?

Yes, you can install solar panels and benefit from solar power if you live in a flat, whether you own or rent. However, it is a bit more complicated than it would be if you lived in a house. This is because you can't decide on your own to make any changes to the whole block of flats, unless you own the building.

Is your house suitable for solar PV?

“Several factors can be considered when determining if your house is suitable for solar PV,” says John Gilham. “Here are the key factors: “Ideally, solar panels work best facing south. They capture the solar energy from dawn until dusk.

Can you put solar panels on apartment buildings in the UK?

You can put solar panels on apartment buildings in the UK; however, it is not as straightforward as for detached houses. If you are a tenant, you will need to ask your landlord to install solar panels on flat roofs, balconies, or other suitable spots. This is a major property upgrade for landlords, so you will need to make a case and convince them.

Are solar panels right for my home?

Are solar panels right for your home? Do I have enough space? Solar panels can be designed to fit the space you have, accommodating for chimneys and unusual roof shapes. The average 3.5kWp solar PV system will take up around 20m<sup>2</sup> of

Do solar panels work if you are not at home?

If you are not at home most days then the solar PV generation will only power the fridge and any other electrical appliances that happen to be running during the daylight hours. The best way to optimise the return on investment from your solar panels is to use all the generation.

Can I install solar panels in my apartment?

Although you may own your apartment, the building as a whole is not yours, so you will need to discuss the solar panel installation with your neighbours and have their approval before going any further. Portable and plug-in solar panels are not powerful enough.

Solar Photovoltaic (PV) panels are generally installed on a roof and use the energy from the sun to power any electrical appliance in your home, including electric radiators. This electricity is free to produce and is great for the environment as no carbon is given off during the production process, unlike electricity produced by a typical electricity provider.

The rated power of solar panels indicates the maximum amount of electricity a module can produce under
