

Cargill Fengling Generator

How does Cargill help regenerative agriculture?

Through this voluntary, market-based program, Cargill provides financial incentives to farmers for environmental outcomes that help to decarbonize agricultural supply chains. Cargill offers farmers access to agronomic experts who can provide customized guidance on how to implement and optimize regenerative agriculture practices.

What is Cargill regenerative connect?

Cargill RegenConnect is built on a simple foundation: Farmers choose the regenerative practices-- such as cover crops or reduced- or no-tillage -- that are best suited to their unique growing conditions.

What does Cargill do?

Cargill is working with farmers and ranchers at every level of production to accelerate and expand the adoption of regenerative agriculture practices. We provide a portfolio of options that enables us to meet farmers where they are and deliver foundational economic and environmental benefits to their operations.

What is Cargill's regenconnect initiative?

Cargill's Regenconnect initiative that aims to leverage remote sensing, crop and soil health modeling to enable Monitoring, Reporting and Verification of outcomes by growers and farmers.

What is Steven Cargill's commitment to regenerative agriculture?

Cargill's commitment is to support farmer-led regenerative agriculture practices and systems across 10 million acres of agricultural land in North America by 2030. Back on the farm in Montezuma, Steven is ready to see more of his fellow farmers adopt regenerative agricultural practices.

What is the Cargill regenconnect program?

Cargill is partnering with Regrow to drive the Cargill RegenConnect Program. Through this partnership, Regrow leverages its capabilities across remote sensing, crop and soil health modeling to enable Monitoring, Reporting and Verification (MRV) of the outcomes achieved by growers as a part of the program.
