When the energy demand rises quickly, the energy storage system can release chilled energy by producing electricity or chilling directly. For instance, a study in 2018 by Zhang et al. demonstrated that a hybrid LAES system that utilizes LNG cold energy could enhance the efficiency of LAES systems. The system combines the LAES system with an ORC ...

In recent years, liquid air energy storage (LAES) has gained prominence as an alternative to existing large-scale electrical energy storage solutions such as compressed air (CAES) and pumped hydro energy storage (PHES), especially in the context of medium-to-long-term storage. LAES offers a high volumetric energy density, surpassing the geographical ...

Renewable energy has attracted increasing attentions and developed rapidly [1], and it will need to grow more strongly in the future [2]. However, the intermittently and volatility of the renewable energy such as wind and solar energy brings severe challenges for power generation and grid connection [3, 4] introducing the energy storage system to storage the ...

Though the temperature reduction and system efficiency of the PV panels using cold thermal energy storage has been observed, there is still a challenge in using PCMs for PV panel cooling. This is due to the high heat load of the PV panels and the low energy density of the cold thermal energy storage materials.

There have been several efforts on the LAES systems integrating LNG cold energy to enhance power performance. These systems generally fall into two main categories, focusing either capacity (capacity-focus system) or efficiency (efficiency-focus system) [16, 17]. Capacity-focused systems prioritize the utilization of LNG cold energy in the air ...

The knowledge gaps for cold storage in the LAES system is indicated in the above literature review: (1) cold storage with packed bed is cost-effective, but there is a large temperature gradient inside the packed bed, leading to exergy destruction and a lower round trip efficiency; (2) cold storage with fluids is promising to overcome the ...

The performance of the system's cold energy storage unit depends on the nature of the medium. Propane's temperature range is adequate for recovering and storing the high-grade cold energy of LNG [26]. Given that a substantial amount of cold energy is also present in the gasification process of liquid air, ...

The integration of cold energy storage in cooling system is an effective approach to improve the system reliability and performance. This review provides an overview and recent advances of the cold thermal energy storage (CTES) in refrigeration cooling systems and discusses the operation control for system optimization. Firstly, the composition ...
