Commercial kitchen equipment energy storage

According to the Commercial Buildings Energy Consumption Survey (CBECS), food service takes up approximately 2% of total commercial floor space, but accounts for about 6% of primary energy consumption. This makes it one of the highest energy-use-per-square-foot segments of the commercial sector and presents a significant opportunity for savings.

Aligning this energy consumption with renewable energy generation through practical and viable energy storage solutions will be pivotal in achieving 100% clean energy by 2050. Integrated on-site renewable energy sources and thermal energy storage systems can provide a significant reduction of carbon emissions and operational costs for the ...

Commercial kitchens--such as those found in full-service and quick-service restaurants, hotels, and hospitals--are intense energy users, consuming as much as three times more energy per square foot than most other types of commercial buildings. Because energy costs for these facilities typically account for between 25 and 30 percent of total operating expenses, ...
