

Doesn't damage hair hair dryer blue wind

Is using a hair dryer bad?

Using a hair dryer isn't necessarily bad and usually only causes minor damage to the hair cuticle when used correctly. However, using a hair dryer at a higher temperature than 66°C can cause irreversible damage to the cuticles and, eventually, the inner fibres of the hair. Why does this happen?

What happens if you use a hair dryer at 66°C?

However, using a hair dryer at a higher temperature than 66°C can cause irreversible damage to the cuticles and, eventually, the inner fibres of the hair. Why does this happen? Well, when you blast hot air onto your wet hair this causes small bubbles to form inside the shafts.

Is it better to air dry or use a hair dryer?

Is it better to air dry or use a hair dryer. Limit hair dryer use to once or twice a week, allowing your hair to rest between uses. The convenience of hair dryers makes them an essential styling tool for many. However, concerns about their potential damage to hair have sparked ongoing debates.

How do you know if a hair dryer is good?

“Another thing to pay attention to is the wattage of your hair dryer. Wattage determines heat and drying speed, and a dryer with a wattage around 1400 will effectively dry all hair textures without going overboard and causing damage.” In other words, blindly choosing any old hair dryer you find at the drugstore simply won't cut it.

Should you use a hair dryer if you have a blowout?

However, unless you're a celebrity with a glam squad on speed dial, having a blowout is an occasional treat rather than a daily or weekly occurrence. However, the best hair-dryers can (almost) emulate that feeling at home. Trust me.

Why is a high wattage hair dryer better?

Higher wattage means stronger airflow and therefore a faster dry time. However, higher wattage hair dryers tend to be heavier and harder to control. Multiple speed and heat settings. High speed and heat is best for drying hair quickly, while a lower speed and heat provides more styling control and limits tangling and frizziness.

This one truly checks all the boxes in the versatility department, catering to a diverse range of hair types and textures.
