Do I need a drill to install a solar panel?

In order to use these excellent mountings (some of the most secure and economical fittings) you may need to drill into the solar panel frame. Drilling metals is not very easy so care should be taken. Ideally a variable speed drill should be used, but a standard drill can be used in short bursts of 5-10 seconds.

How long should a drill be used for a solar panel?

Drilling metals is not very easy so care should be taken. Ideally a variable speed drill should be used, but a standard drill can be used in short bursts of 5-10 seconds. Any longer and the drill bit will overheat (however this is not typically an issue with the thin aluminium of a solar panel frame).

Do I need to drill a hole in the frame?

I really do need to drill a few holes in the side of the frame horizontally, very carefully so as not to touch the panels or drill down vertically through the L section and through the very edges of the panels. Drilling down might be more accurate a bit easier and possibly more effective at letting the water out.

How deep is a drilled shaft pile for a solar array?

Drilled shaft piles for solar array footings can vary anywhere from 6 to 24 inches in diameter and 5 to 30 feet deep, depending on site conditions and other variables. The drilled shaft or borehole is filled with high-strength cement grout or concrete. At times, steel casing or re-bar is used for reinforcement.

Do you need a screwdriver to install solar panels?

You will use Flathead and Phillips-head screwdrivers countless times on a DIY solar installation. You'll need to screw in mounting hardware or scrape old sealant away with a flathead. A power drill can sometimes serve the same purpose, but you risk over-tightening and stripping the screws.
