In this calculation, the energy storage system should have a capacity between 500 kWh to 2.5 MWh and a peak power capability up to 2 MW. Having defined the critical components of the charging station--the sources, the loads, the energy buffer--an analysis must be done for the four power conversion systems that create the energy paths in the station.

The energy storage charging pile achieved energy storage benefits through charging during off-peak periods and discharging during peak periods, with benefits ranging from 646.74 to 2239.62 yuan. At an average demand of 90 % battery capacity, with 50-200 electric vehicles, the cost optimization decreased by 16.83%-24.2 % before and after ...
