2019, International Journal for Modern Trends in Science and Technology. This study develops a newly designed, patented, bidirectional dc/dc converter (BDC) that interfaces a main energy storage (ES1), an auxiliary energy storage (ES2), and dc-bus of different voltage levels, for application in hybrid electric vehicle systems.

Recent works have highlighted the growth of battery energy storage system (BESS) in the electrical system. In the scenario of high penetration level of renewable energy in the distributed generation, BESS plays a key role in the effort to combine a sustainable power supply with a reliable dispatched load. Several power converter topologies can be employed to ...

A thorough review on non-isolated bidirectional dc-dc converters for ESDs is presented in [], where several topologies are analyzed in detail. A qualitative comparison among some popular approaches is also presented in Table 1 in terms of component count and behavior of the battery current in boost mode. For high-power applications, the bidirectional interleaved ...

In this paper, a bidirectional non-isolated DC/DC converter for hybrid energy storage systems has been proposed. The converter is constituted by the integration of two conventional two-level topologies, with a parallel connection on their low-voltage sides (LVSs) and a series connection on their high-voltage sides (HVSs). Thus, a high-voltage gain can be ...
