

What is energy debugging?

Energy debugging is now a circular development cycle where developers can use Energy Micro's hardware and software tools together with EFM32 MCUs to achieve the lowest energy consumption in their applications (Figure 2). The developer can iteratively debug the code towards energy friendliness with instant feedback on the applied changes.

Can We automate the process of energy debugging?

Being able to automate the process of energy debugging would be vital to the future of energy-aware software development. Conventionally, execution time of applications is a commonly adopted proxy measure for software developers to identify the energy bottlenecks in their program code.

What is Energy Micro's advanced energy debugging tool?

These energy pitfalls can now be avoided with Energy Micro's patent pending toolset for advanced energy debugging. The simple and affordable solution presented by Energy Micro enables developers to identify and remove energy bugs with a high degree of accuracy.

What is enDebug & how does it work?

Our enDebug framework optimizes energy on compiler generated code and provides further energy reduction. Automated Code Optimization -- As software inefficiency increasing becomes the dominant source of wasteful energy consumption, there is a strong urge to develop energy-aware program code.

How important is time factor for energy debugging?

Energy consumption is simply the area below the current trace, so the smaller the area the smaller the energy drain. This is achieved by reducing the current consumption and the time the MCU takes to execute tasks. It is therefore easy to realize how important the time factor is for energy debugging.

Can software tools be used for valuing energy storage?

Taking advantages of the knowledge established in the academic literature and the expertise from the field, there are efforts from multiple parties (e.g., national laboratories, utilities, and system integrators) in developing software tools that can be used for valuing energy storage.
