In the past few decades, electricity production depended on fossil fuels due to their reliability and efficiency [1].Fossil fuels have many effects on the environment and directly affect the economy as their prices increase continuously due to their consumption which is assumed to double in 2050 and three times by 2100 [6] g. 1 shows the current global ...

The basic principle is to avoid performance loss or equipment damage. These are caused by the energy storage system getting too hot or too cold. This is prevented through heat dissipation, cooling, or heating. In industry, thermal management is vital. This is because the energy storage system makes a lot of heat when charging and discharging.

1 ??· Industrial and commercial energy storage is a collection of energy storage and supply as one of the equipment. With the rapid development of renewable energy, the demand for electric energy in the industrial and commercial fields is gradually increasing. However, the instability of renewable energy sources such as solar and wind makes their power supply
