

Europe and China are leading the installation of new pumped storage capacity - fuelled by the motion of water. Batteries are now being built at grid-scale in countries including the US, Australia and Germany. Thermal energy storage is predicted to triple in size by 2030. Mechanical energy storage harnesses motion or gravity to store electricity.

3. 33 Today our focus will be on stationary battery energy storage systems, although there are other types Source: IRENA (International Renewable Energy Agency) Similar to how trans- mission lines move electricity from one location to another, energy storage moves electricity from one time to another While oil and coal, are examples of "stored energy," our ...
