Council of Texas (ERCOT) region. As solar resources outpace wind in Texas, energy storage systems have become essential assets for grid reliability and resiliency.

Today's largest battery storage projects Moss Landing Energy Storage Facility (300 MW) and Gateway Energy (230 MW), are installed in California (Energy Storage News, 2021b, 2021a). Besides Australia and the United States (California), IRENA ( 2019 ) defines Germany, Japan, and the United Kingdom as key regions for large-scale batteries.

the customer-sited storage target totals 200 megawatts (MW). California has also instituted an incentive program for energy storage projects through its Self-Generation Incentive Program (SGIP) [2]. 2014 incentive rates for advanced energy storage projects were \$1.62/W for systems with up to 1 MW capacity, with declining rates up to 3 MW.

Utility scale battery storage is rapidly transforming the American energy landscape, making renewable sources like solar and wind more reliable and easier to integrate into our power grid. Since 2021, the capacity for these storage solutions in the U.S. has been on a steep upward trajectory. Current projections suggest an increase of 89% by the end of 2024, ...
