

Does energy storage need a regulatory framework?

Our review demonstrates that no jurisdiction currently provides a comprehensive regulatory framework for energy storage, with the majority of jurisdictions currently allowing storage to be defined as "generation" for the purposes of licensing and other regulatory requirements.

What is included in the energy storage project summary?

Each summary covers the sector's development and the legal and regulatory environment to consider in the deployment of energy storage projects.

What is energy storage & why is it important?

Energy storage (ES) plays a key role in the energy transition to low-carbon economies due to the rising use of intermittent renewable energy in electrical grids. Among the different ES technologies, compressed air energy storage (CAES) can store tens to hundreds of MW of power capacity for long-term applications and utility-scale.

What is a standalone energy storage project?

Standalone energy storage projects are increasingly utility-scale installations. For example, a battery array can provide a range of services, including ancillary services, to the system operator or network owner. This type of project allows for the deferral of network reinforcement works or islanded networks.

Are there legal issues relating to energy storage?

As set out above, there are a wide variety of energy storage technologies and applications available. As a result there are a number of legal issues to consider, although the relative importance of such issues will be informed by the specific energy storage project design. revenue stream requirements e.g. double circuit connection.

Can a PTC-electing energy production facility be paired with an energy storage facility?

Principally, this means that a PTC-electing eligible energy production facility (such as a solar facility now eligible to elect to use the PTC after the IRA) may be paired with an energy storage facility without impacting the ability to claim an ITC for the storage facility.

The Delhi Electricity Regulatory Commission has approved the Battery Energy Storage System (BESS) agreement between BSES Rajdhani Power and Kilkari BESS for the establishment of a 20MW/40MWh energy storage project. The Commission also adopted a single-part tariff structure, comprising capacity charges of INR 5.7 million (~\$68,981)/MW per year.

Land Use Permitting and Entitlement There are three distinct permitting regimes that apply in developing BESS projects, depending upon the owner, developer, and location of the project.

New Delhi | 08 May 2024 -- In a significant step forward for India's energy transition, the Delhi Electricity Regulatory Commission (DERC) has granted regulatory approval of India's first commercial standalone Battery Energy Storage System (BESS) project. This groundbreaking initiative is supported by The Global Energy Alliance for People and Planet (GEAPP's) ...

Energy storage resources are becoming an increasingly important component of the energy mix as traditional fossil fuel baseload energy resources transition to renewable energy sources. There are currently 23 states, plus the District of Columbia and Puerto Rico, that have 100% clean energy goals in place. Storage can play a significant role in achieving these goals ...

storage, the energy infrastructure package and the role that storage projects should have and other issues such as grid fees, network codes, etc. Section 4 presents some recommendations from the stoRE project team, based on the work presented in sections 2 and 3, for adapting the market design in order to facilitate the

The siting and feasibility aspects of a potential pumped-storage project are one major hurdle, but the licensing process through the Federal Energy Regulatory Commission (FERC) is another that can add significant time - up to five years or more - on a development schedule for a new project and thus constrain its development.

Rules and regulations vary across regions and states, which forces energy storage project developers to navigate a patchwork of potential markets. Developers that want to deploy storage across multiple markets may need to conduct separate analyses to determine ...

The Energy Policy Act of 2005 added a new § 4(f) to the Natural Gas Act, stating that the Commission may authorize natural gas companies to provide storage and storage-related services at market-based rates for new storage capacity (placed into service after the date of enactment of the Act), even though the company can't demonstrate it lacks ...

Energy storage projects involve systems that capture energy for use at a later time, playing a crucial role in modern energy ecosystems. These projects utilize various technologies, such as batteries, pumped hydroelectric storage, and thermal storage, which allow for the management of energy supply and demand.

The U.S. Federal Energy Regulatory Commission (FERC) has received two applications for preliminary permits for a pumped storage project at the same location, Lake Elsinore in California. The location is the site of the Lake Elsinore Advanced Pumped Storage (LEAPS) project, which was proposed by Nevada Hydro Company Inc.
