After the user downloads the picture to the STONE serial touch screen display, the screen will continue to display the picture after the power is supplied. There are a text display box and three buttons in the picture. The TOOL 2019 software can configure what data the STONE screen sends through the serial port when the buttons are pressed.

This connection will inevitably put stress on local energy networks, which requires either significant capital expenditure on reinforcement to remedy, or energy storage." In the same way that BESS can support EV charging, it can also be deployed at scale to bridge the "power gap" for ship-to-shore.

The meter supports 2-wire RS485 serial bus. The meter does not support RS422 and RS232. A USB-RS485 converter or RS232-RS485 converter can be used if your computer is equipped with a USB port or RS232 port. The pre-configured USB-RS485 converter stocked by Accuenergy is guaranteed to work with our meters.
