Can thermal management of compressed air energy storage systems provide alternative cooling methods?

That is equivalent to 345.8 Wh and 318.16 Wh respectively (3320/3600 × 375&345). This work examined the potential of using the thermal management of compressed air energy storage systems to provide an alternative to conventional cooling methods.

Does a compressed air energy storage system have a cooling potential?

This work experimentally investigates the cooling potential availed by the thermal management of a compressed air energy storage system. The heat generation/rejection caused by gas compression and decompression, respectively, is usually treated as a by-product of CAES systems.

Can compressed air energy storage systems be used for air conditioning?

This work presents findings on utilizing the expansion stage of compressed air energy storage systems for air conditioning purposes. The proposed setup is an ancillary installation to an existing compressed air energy storage setup and is used to produce chilled water at temperatures as low as 5 °C.

How does a tri-generation compressed air energy storage system work?

The operation of a tri-generation compressed air energy storage (TCAES) systems has a pre-heating free air expansion in its discharge operation, which means that the expanded air temperature reaches extremely low temperatures (~ -100 °C), that facilitate its usage in district cooling applications.

How is thermochemical recuperation integrated into advanced compressed air energy storage?

Advanced Compressed Air Energy Storage integrates thermochemical recuperation, where direct heat transfer is achieved between gas and solid. Both known and hypothetical redox reactions are considered. This integration enables a more stable turbine inlet temperature, leading to longer storage durations and higher round trip efficiencies.

What is a heat pump & thermal energy storage system?

Heat pumps and thermal energy storage for cooling HPs can be reversed with additional valves to extract heat from the dwelling, thus provide cooling. Technically speaking HPs are thus vapour-compression refrigeration system (VCRS).
