Why should data centre owners choose a cooling tower?

Fans are operated at a lower speed, which reduces energy usage. Taking advantage of free cooling and variable flow modes can dramatically reduce cooling tower energy use. Cooling tower modularity provides another advantage. Data centre owners may prefer to build out their facilities over time as server demand grows.

What is a thermal energy storage tower?

Thermal energy storage tower inaugurated in 2017 in Bozen-Bolzano, South Tyrol, Italy. Construction of the salt tanks at the Solana Generating Station, which provide thermal energy storage to allow generation during night or peak demand. The 280 MW plant is designed to provide six hours of energy storage.

Do data centres need evaporative cooling towers?

The massive computer power within these data centres generates heat, making efficient cooling a key building system requirement. Evaporative cooling towers are an integral part of many data centre cooling systems. Recently some have questioned the use of cooling towers, citing water scarcity to bolster their arguments.

Is evaporative cooling tower a viable cooling technology for high-density data center?

PUE of data center is improved by 3.3 % compared with evaporative cooling tower. Footprint of data center is reduced by 159 % compared with evaporative cooling tower. The evaporation process of liquid air leads to a high heat absorption capacity, which is expected to be a viable cooling technology for high-density data center.

Does liquid air energy storage improve data-center immersion cooling?

A mathematical model of data-center immersion cooling using liquid air energy storage is developed to investigate its thermodynamic and economic performance. Furthermore, the genetic algorithm is utilized to maximize the cost effectiveness of a liquid air-based cooling system taking the time-varying cooling demand into account.
