This document summarizes solar power generation from solar energy. It discusses that solar energy comes from the nuclear fusion reaction in the sun. About 51% of the sun's energy reaches Earth's atmosphere. There

are two main technologies for solar power generation: solar photovoltaics and solar chimney technologies.

For the generation of electricity in far flung area at reasonable price, sizing of the power supply system plays an important role. Photovoltaic systems and some other renewable energy systems are, therefore, an excellent choices in remote areas for low to medium power levels, because of easy scaling of the input power source [6], [7]. The main attraction of the PV ...
