

Does the heat generation system contribute to electricity production in Finland?

It should be mentioned that the study did not include the heat generation system, which has an outstanding share in power production in Finland and has a role also in electricity production due to combined heat and power plants.

Can hydrogen storage be integrated into the energy systems model?

Impact of incorporating hydrogen storage into the energy systems model is analysed. LEAP-NEMO model for Finland's electricity generation system until 2030 is optimized. Integration of hydrogen storage enables seasonal storage of renewables. Hydrogen storage decreases electricity imports and carbon dioxide emissions.

Why is Gasgrid Finland and Fingrid important?

Gasgrid Finland and Fingrid promote comprehensive development of energy infrastructure in line with future needs in order to promote Finland's competitiveness. In addition to energy infrastructure, it is important to promote the realization of investments in renewable energy production and hydrogen economy value chains in Finland.

How much electricity does Finland produce a year?

In 2018, electricity demand in Finland was 87.4 TWh, out of which 67.5 TWh of electricity was generated while 22.5 and 2.6 TWh of electricity were imported and exported, respectively. The total installed electricity generation capacity was 17.2 GW in 2018, which rose to 17.4 GW in 2019.

Are thermal power plants in Finland CHP based?

Most of the thermal power plants in Finland are CHP based; however, the costs and efficiencies incorporated in the model were based on the fuel type in general that reflected more on conventional power plants. This approach has been considered because the heat generation is not modelled.

Is hydrogen storage a competitive storage technology?

With the advancement in technological development, hydrogen storage has emerged out as a competitive storage technology that can also offer seasonal storage capability, which is a critical requirement for harnessing maximal benefits from high VRES integration in the grid.

As reduction in power generation emissions is partly realized by increase in intermittent energy sources, electricity storage may become an important part of a carbon neutral power system. ...

One of the deepest mines in Europe is poised to spend the next portion of its life as stationary energy storage. Located in Pyhäjoki, a remote Finnish community 279 miles north of Finland's capital Helsinki, the 1,400-plus-meter-deep copper and zinc mine was decommissioned in 2022 after more than 50 years of service. The mine opened ... Continue ...

An American University Research Center. Menu Blog Posts; Posted on April 15, 2021 April 18, 2021 by Institute for Carbon Removal Law and Policy. Tensions in the energy transition: Swedish and Finnish company perspectives on bioenergy with carbon capture and storage ... The results are framed around four emerging tensions regarding bioenergy ...

Research in RISE focuses on the Development of Novel Materials and Device Technologies in the Area of Sustainable Energy Storage. There is an ongoing PhD program in RISE starting 2023 and the Ph.D. degree is awarded by the Academy of Scientific and Innovative Research (AcSIR).

The objective of this research is to model the Finnish electricity generation system to identify the impact of current energy plans of Finland on the electricity mix and the impact of adding large-scale hydrogen storage to the system. ... LEAP is a software tool developed by the Stockholm Environment Institute (SEI). ... Adding seasonal energy ...

The Research Council of Finland's Flagship Programme is an instrument that supports high-quality research and increases the economic and societal impact emerging from the research. The Finnish Flagships represent an effective mix of close cooperation with business and society, adaptability and a strong commitment from host organisations. International ...

The clean energy transition and the green transition are bringing mining and battery technology industries to Finland. As a result, sulphate discharges into inland waters and the Baltic Sea will increase. ... Finnish Environment Institute is a research institute and a centre of expertise providing knowledge and solutions enabling sustainable ...

This will not only require extended use of renewable energy sources, but also investments in energy storage systems. StoRIES, a new European research consortium, has now been established to accelerate their development. It is coordinated by Helmholtz Institute Ulm (HIU) that was founded by Karlsruhe Institute of Technology (KIT) and Ulm University.

Jiangsu FGY Energy Storage Research Institute Co., LTD. (FGY) is a holding subsidiary company of Dynavolt Renewable Energy Technology Co., Ltd. (stock code:002684), which is a high-tech enterprise ...

Juha Nurmi's 10 research works with 508 citations and 1,088 reads, including: Changes in volumetric energy densities during storage of whole-tree feed stocks from silvicultural thinnings

Sustainable energy storage is foundational to moving away from fossil fuels, but advances are needed in the efficiency, reliability, safety, sustainability, and scale of energy storage solutions. A particular focus is needed on multi-functional batteries that integrate and optimize storage with solar and wind generation, as well as carbon capture.

The Finnish Institute of International Affairs (FIIA) is a partner in the research consortium "InvigoratEU - Invigorating Enlargement and Neighbourhood Policy for a Resilient Europe" coordinated by the University of Duisburg-Essen. The project is funded by the European Commission's Horizon Europe research and innovation programme.

VTT has decided to decommission its Finnish Reactor 1 (FiR 1) in Otaniemi, Espoo. ... in collaboration with the Atomic Energy Research Institute of the Hungarian Academy of Sciences (KFKI). ... determining the radioactivity characteristics and arranging interim storage of the waste. The Finnish Nuclear Waste Fund has approximately EUR 10 ...

Another Finnish case study and large-scale GSHP / borehole thermal energy storage (BTES) application - Aalto New Campus Complex - is also investigated in this research. The specifically developed methodology for management of measured data is considered essential due to its capability to handle data with high uncertainty (thermal meters) by ...

Summer Undergraduate Program on Energy Research (SUPER) Sustainability Undergraduate Research in Geoscience and Engineering (SURGE) ... Precourt Institute for Energy. Energy storage; Scientists seek to invent a safe, reliable, and cheap battery for electricity grids ... Stanford research finds the cost-effective thermal properties that make ...

Chapter 2 - Electrochemical energy storage. Chapter 3 - Mechanical energy storage. Chapter 4 - Thermal energy storage. Chapter 5 - Chemical energy storage. Chapter 6 - Modeling storage in high VRE systems. Chapter 7 - Considerations for emerging markets and developing economies. Chapter 8 - Governance of decarbonized power systems ...
