Can PV power stations be installed in grassland areas?

As a result,PV power stations have rapidly developed in grassland areas(Adeh et al.,2019; Armstrong et al.,2016; Dias et al.,2019; Martín-Chivelet,2016),particularly in the northern grassland areas of China (Bai et al.,2022; Zhao et al.,2019).

Do PV panels reduce plant productivity in grasslands?

A previous study in the UK found that PV arrays in grasslands reduced plant productivity by 25%in sheltered zones under the PV panels (referred to as 'Under zones') compared to the ambient grassland; however,soil properties did not vary between the treatments (Armstrong et al.,2016).

Are PV arrays better than common grassland fencing?

PV arrays have better restoration effectsthan common grassland fencing. PV arrays increase soil C sequestration by 78.61% compared to previous measures. PV arrays can restore the degraded grassland and resolve land use conflicts. Photovoltaic (PV) facility installation occupying large land areas gradually expands into vast grasslands.

Are grasslands a good place to install solar panels?

Grassland ecosystems,which make up approximately 24% of the earth's land surface (Yang et al.,2020),offer immense potential for meeting the land requirements for PV arrays (Bai et al.,2022). Due to their short vegetation and flat topography,grasslands are favorable locationsfor installing PV arrays (Kannenberg et al.,2023).
