

How to design a 10MW photovoltaic energy storage microgrid

How many modules are needed for a 10MW grid connected PV system?

Fig. 11-5. 10MW Grid-Connected PV System (Monocrystalline). Economical results. 11.2. Polycrystalline technology simulation The results, obtained after simulating the polycrystalline grid connected PV system, shows that for each field is necessary to install 387 strings with 19 modules in series.

How can a microgrid improve the reliability of solar PV?

In order to overcome the problems associated with the intermittency of solar PV and enhance the reliability, energy storage systems like batteries and/or backup systems like diesel generators are commonly included in the microgrids [11,12].

How much does a 10MW grid connected PV system (monocrystalline) cost?

So, the total yearly cost of the plant will be 471.145,29 EUR/year. Finally, and according to the estimated energy production is possible to know the cost of each kWh of energy produced (0,04 EUR/kWh). Fig. 11-2: 10MW Grid-Connected PV System (Monocrystalline). Simulation parameters. Fig. 11-3. 10MW Grid-Connected PV System (Monocrystalline).

How are microgrids energy sources sized?

Sizing of microgrids energy sources does not require a deep study of the interactions between its subsystems; moreover, this stage of the design relies on data such as wind speed or sunlight profiles measured with a resolution of minutes or even hours [17, 29].

Why do we need a PV-based microgrid?

The increasing demand for reliable and clean energy promotes the installation of PV-based microgrids. Appropriate sizing of microgrid components, that is, number and size of PV modules, batteries, DGs and associated power electronic devices determines the efficient and economic design of the microgrid.

Do PV based microgrids have a negative environmental impact?

Moreover, battery energy systems are also reported to have negative environmental impacts, which is also required to be taken into consideration while sizing/designing a PV-based microgrid [48 - 50]. In Figure 3, the common design considerations for PV based microgrids have been summarised.
