

# How to replace the generator belt of Fengjun 7

The belt is a four ridge design and from what I could see, it was never put on right in the first place. Both pulleys have grooves where the belt ridges ride and one groove on each pulley was rusted while the others were nice and shiny. There was also evidence of the belt rubbing up against the bottom engine/generator case.

All of the following parts rely on your 6.7 serpentine belt: Idler pulley; Accessory belt drive; Power steering pulley; Radiator fan pulley; Crankshaft pulley; Air conditioning compressor; Accessory drive belt ...

After filling up the generator, you have to change the oil within the first month or first 20 hours of use whichever comes first. So, it is important to change the oil every 6 months and or 100 hours of use. It is good to change the oil within the first few hours of use because this is the break-in period of a generator.

In a powertrain fitted with eTorque, a belt-driven motor-generator unit replaces the conventional alternator on the engine. This motor-generator unit performs several functions in addition to the standard operation of the alternator, which is to provide electricity to keep the vehicle's battery charged.

Adjust the generator belt tension to 1/2 in (1.3 cm) up/dwn travel, see Generator Belt Tension Adjustment. Install the left and right brake pads and adjust the brake pad gap to specification, ...
