

How to solve the electricity bill of solar power generation

While \$150 a month may not sound like much, it adds up quickly over the course of the year and over the lifetime of a solar panel system: without solar, we would have spent \$58,000 over 25 years on electricity and \$73,000 over the next 30 years, assuming a \$150 monthly bill, with a 2% annual increase in electricity rates.

This research will enable even more solar energy to be integrated into the grid, while tackling the obstacles utilities face when incorporating solar. In 2012, SETO also launched a research program that helped utilities, grid operators, and solar power plant owners to better predict when, where, and how much solar power will be produced. More ...
