

KOSTAL PLENTICORE plus: the most efficient hybrid inverter is suitable for every application. PLENTICORE plus: the name says it all. The three-phase hybrid inverter is always the right choice thanks to its various fields of application, be it for power generation with up to 3 MPP trackers or for additional storage of the self-generated energy.

Kostal means innovation and versatility. As the successor of the Plenticore G2 series, the new Kostal Plenticore G3 inverter incorporates many new features: Kostal G3 takes flexibility to a new level, since you can adapt it ...

The KOSTAL inverter converts solar power into usable household electricity. The PLENTICORE can be used as a solar, hybrid or battery inverter. In addition, the PLENTICORE is set up for growing energy demands because the inverter's output can be increased, even at a later date. The KOSTAL PLENTICORE offers a power range from 4 to 20 kW.

Kostal is a manufacturer of photovoltaic inverters which offers high quality solutions and always best service. Kostal's philosophy is to create products thinking about the future, cooperatively developing ideas and projects with their partners. Piko MP and Piko, thanks to the wide range of input power and the flexibility of installation, offer solutions suitable for every type of installation.

KOSTAL inverters - always the right decision. Make the right decision with the KOSTAL inverters from the PLENTICORE and PIKO series - ready for immediate use in small and large power classes, all operating modes and many areas of application. ... PV planning with KOSTAL. Find your nearest KOSTAL specialist partner now Find an installer now ...

The KOSTAL PLENTICORE G3 inverters and the VARTA.wall battery storage system are specially designed for use in photovoltaic systems to ensure maximum efficiency and compatibility. The inverter ensures that the direct current generated by the solar energy system is converted into alternating current that can be used in the household or fed into the grid.

KOSTAL battery inverters. Pure battery inverters are particularly worthwhile for those who already own a photovoltaic system or want to set up a storage system independently of the PV system. They are simply connected to the AC grid in ...

KOSTAL battery inverters. Pure battery inverters are particularly worthwhile for those who already own a photovoltaic system or want to set up a storage system independently of the PV system. They are simply connected to the AC grid in parallel with the PV system and the distribution is supplemented with the intelligent KOSTAL Smart Energy Meter.

Kostal photovoltaic inverter

How does PV system monitoring work? KOSTAL inverters offer an integrated data logger as standard, which stores all relevant data on energy production and the device's operational statuses. If the inverter is connected to the home's network, the data can be stored and visualised in the KOSTAL Solar Portal. At the same time, you can see the data ...

The core of every photovoltaic system: KOSTAL inverters. With the PLENTICORE plus and the PIKO MP plus, KOSTAL offers highly efficient inverter solutions that are the heart of every photovoltaic system. They convert the solar power generated by the PV modules into usable alternating current, which can then be consumed directly.

Registering the PV inverter on the KOSTAL Solar Portal also has advantages when the system needs to be serviced: KOSTAL Solar Electric's qualified support team can access the inverter data on the portal and analyse the system data. ...

The modern design and interior values of the PIKO IQ win customers over. This makes it the smart choice when looking for a solar inverter, even when it comes to small private PV systems. The three-phase inverter is perfectly suited to repowering due to its extended MMP range. This makes it possible to replace an old inverter with a new PIKO IQ.

Our subsidiary, KOSTAL Solar Electric GmbH, handles sales and marketing of our photovoltaic inverters and storage solutions. In 2016 KOSTAL Solar Electric celebrated its 10th anniversary. This can also be traced back to the good and intense partnerships we have been able to establish with customers, suppliers and service providers.

Photovoltaic repowering is a way to modernise the photovoltaic system. This usually involves a performance-related replacement of the inverter, for example. Due to technological advancement, modern inverters have a significantly higher efficiency than the existing device and optimise the yields of the existing system.

The primary role of a solar inverter is to convert DC solar power to AC power. The solar inverter is one of the most important parts of a solar system and is often overlooked by those looking to buy solar energy. This review highlights the best inverters from the world's leading manufacturers to ensure your solar system operates trouble-free ...

How and where can I get the KOSTAL Solar App? The Solar App is a free service from KOSTAL Solar Electric. It allows photovoltaic systems to be monitored at any time, simply and conveniently via smartphone or tablet. Setting up and using the app requires access to the KOSTAL Solar Portal, where an inverter must be set up.
