What is spot welding machine?

Spot welding machine is a type of resistance welding. During welding, it uses upper and lower cylindrical electrodes to apply pressure, ensuring tight contact between the surfaces of the workpieces.

What are the different types of spot welding machines?

After cooling, a weld point is formed. Depending on the usage scenario and welding objects, spot welding machines are further divided into medium frequency spot welding machines, precision spot welding machines, and energy storage spot welding machines.

How to choose a spot welding machine?

The selection of a spot welding machine depends on factors such as production volume, material properties, joint configuration, and required weld quality. Due to its operational efficiency and versatility, spot welding has become the predominant joining method for sheet metal fabrication in many manufacturing industries.

What is a super energy gathered pulse welding machine?

The machine's super energy-gathered pulse technology combines with a max welding power of 36 KW to provide a reliable welding effect.
