

Lithium Battery Energy Storage Operation Instructions

How do I transport a lithium battery?

Cartons or cratesused to transport lithium batteries must have an approved warning label affixed. Air transportation of lithium batteries is prohibited. Do not stand below a battery when it is hoisted. Never lift the battery at the terminals or the BMS communication cables; only lift the battery at the handles.

Do I need a storage mode for a lithium battery?

Some charging profiles offer a storage mode. This is not neededfor a lithium battery, but if the charger has a storage mode then set this to the same value as the float voltage. Some chargers have a bulk voltage setting. If this is the case, set the bulk voltage to the same value as the absorption voltage.

Does this product specification apply to lithium iron phosphate batteries?

This product specification applies to lithium iron phosphate battery products provided by our company. The product we provide (and which is described in this manual) complies with the requirements of the IEC62133 standard. Customers who use batteries manufactured or sold by our company must read this user manual carefully before using them.

How do I charge a lithium battery?

This is due to the different number of cells. Use a battery charger suitable for lithium batteries, such as a Blue Smart charger. Set the charger to the charge profile as indicated in the above table. The supervisor connects with the VictronConnect app to the battery. The supervisor monitors the individual cell voltages at all times.

How do you store a battery?

light,extremely hot environments,damp environments,etc.)Batteries: Should be stored in line with the manufacturer's instructions for each device. This includes storage in a cool dry environment,away from heat sources ch as fires and heaters,and out of the reach of children. P rchasing: Should only be purchased from reputabl

What temperature should a battery be stored?

The battery should be stored at a temperature of 41°F~104°F,and at a relative humidity <=90% (104°F ± 36°F); additionally,the storage environment should be clean,dry,and well-ventilated. Avoid contact with corrosive substances and keep away from fire and heat sources. The battery is in a half-power state, of about 50-60%.

A. Mechanical: pumped hydro storage (PHS); compressed air energy storage (CAES); flywheel energy storage (FES) B. Electrochemical: flow batteries; sodium sulfide C. Chemical energy storage: hydrogen; synthetic natural gas (SNG) D. Electrical storage systems: double-layer capacitors (DLS); superconducting magnetic energy storage E. Thermal ...
