

The PCM can be charged by running a heat pump cycle in reverse when the EV battery is charged by an external power source. Besides PCM, TCM-based TES can reach a higher energy storage density and achieve longer energy storage duration, which is expected to provide both heating and cooling for EVs [[80], [81], [82], [83]].

Wind and solar resources are one of the most competitive sources of renewable energy (Liu et al., 2019). After the large-scale integration of wind and solar resources into the power grid, the problem of insufficient flexibility of the MG system is outstanding because of the inherent volatility and randomness (Elkadeem et al., 2020). The MG system thus needs to have ...
