What is a photovoltaic mounting system?

Photovoltaic mounting systems (also called solar module racking) are used to fix solar panels on surfaces like roofs, building facades, or the ground. These mounting systems generally enable retrofitting of solar panels on roofs or as part of the structure of the building (called BIPV).

Which solar racking company should I Choose?

The two most popular companies for racking systems are Unirac and Ironridge, but you can also do some more research to find better options if these are not for you. Most companies like these use specialized clamping or screwing components that connect the solar panels to the racking system.

Can a solar array be mounted on a rooftop?

The solar array of a PV system can be mounted on rooftops, generally with a few inches gap and parallel to the surface of the roof. If the rooftop is horizontal, the array is mounted with each panel aligned at an angle.

Can solar panels provide shade instead of patio covers?

Solar panels can also be mounted as shade structures where the solar panels can provide shade instead of patio covers. The cost of such shading systems are generally different from standard patio covers, especially in cases where the entire shade required is provided by the panels.

What materials are used for mounting base brackets?

Mounting base brackets are fabricated from Series 6000 structural marine grade aluminum. 5/16" hardware included. "L" Feet are fabricated from high-strength 3/16" aluminum and include a vertical slot for adjusting to irregular surfaces. 5/16" coated hardware included. "L" Feet are fabricated from high-strength 3/16" aluminum.

What clamps do I need to install solar panels?

Top-mount clamps are the most common attachment method, and support modules between .9" and just over 2.0". Know the thickness of your modules and pick the corresponding end clamps, mid clamps or cap strips for the finishing part of the install. SolarTown offers all the necessary clamps or cap strips to support your installation.

Solar panel mounts are used to secure your solar array to a surface and can also be used to optimize your panel's energy production through its angle and direction. The type of solar mounts that would be required for an ...

Key Components and Specifications. Solar mounting systems comprise several components: **Mounting Brackets:** These secure the solar panels to the mounting structure, ensuring stability. **Rails:** Rails provide a
