500 W solar panels are used mainly on large-scale installations where the panel's physical size doesn't matter. But they're not ideal for a solar panel system on the roof of your home. When someone makes a cost-effective 500 W panel in a more reasonably sized 120 half-cell module, sign me up. What is the best solar panel wattage for your home?

To find the solar panel output, use the following solar power formula: output = solar panel kilowatts \times environmental factor \times solar hours per day . The output will be given in kWh, and, in practice, it will depend on how sunny it is since the number of solar hours per day is just an average.
