

Photovoltaic panel support installation construction plan

How to plan a PV installation?

Surface Area: The surface area of the site at which the PV installation is intended should be known, to have an estimation of the size and number of panels required to generate the required power output for the load. This also helps to plan the installation of inverter, converters, and battery banks.

What is a roof mounted photovoltaic system guidance?

The guidance refers only to the mechanical installation of roof mounted integrated and stand-off photovoltaic systems; it provides best practice guidance on installation requirements and does not constitute fixing instructions.

To whom is the photovoltaic (PV) guide applicable?

This guide is applicable to Clients planning or undertaking installation of Photovoltaic (PV) systems on 'Large Scale' buildings. These buildings are typically owned by organisations from the public or private sector, such as educational establishments, local government, a local community, or commercial organisations.

What guidance is there on the performance of PV systems?

The Good Practice Guide provides some guidance on the performance of PV systems in Section 4 of the updated PV Installers Guide. The PV Specialist should model the system using one of the software simulation programmes available, which have a 'library' of modules and inverters and can select the sunlight conditions most representative of the site.

What is a mains-connected PV installation?

A mains-connected PV installation generates electricity synchronised with the electricity supply. Installers are obliged to liaise with the relevant Distribution Network Operator (DNO) in the following manner: 30 days. Multiple installation covered by G83/1 - application to proceed (G83/1 appendix 2).

What are the different types of PV installation?

There are two main types of PV installation: integrated into the roof surface, often referred to as Building-Integrated Photovoltaic (BIPV) systems or mounted above the existing roof covering, also referred to as stand-off systems.
