

The factors that affect the disturbance in photovoltaic energy are the size of the photovoltaic plant, connection voltage, short-circuit power in the interconnection and the degree of penetration of the system, as it appears in (Hernandez et al., 2011). Photovoltaic generation shares the characteristics of other distributed generation units.

The energy storage station is a supporting facility for Ningxia Power's 2MW integrated photovoltaic base, one of China's first large-scale wind-photovoltaic power base projects. It has a planned total capacity of 200MW/400MW, and the completed phase of the project has a capacity of 100MW/200MW.

The optimal configuration of energy storage capacity is an important issue for large scale solar systems. a strategy for optimal allocation of energy storage is proposed in this paper. First various scenarios and their value of energy storage in PV applications are discussed. Then a double-layer decision architecture is proposed in this article. Net present value, investment payback period ...

photovoltaic (PV) technology has become an increasingly important energy supply option. A substantial decline in the cost of solar PV power plants (80% reduction since 2008) ² has improved solar PV's competitiveness, reducing the needs for subsidies and enabling solar to compete with other power generation options in some markets.
