Can IoT be used in cycle energy consumption & storage?

The Internet of Things (IoT) as a growing and fast new technology has recently attracted attention from around the world. The application of IoT in several areas has shown its success. However, the IoT is still in its infancy regarding applications in Cycle Energy Consumption and Storage.

What is Internet of energy?

Internet of Energy is a decentralized, smart and viable energy solution that is yet unexplored in the industrial paradigm. The concept is emphasized in close relation to the Internet of Things, Industrial Internet of Things and Industry 4.0.

What are the applications of IoT in the energy sector?

Applications for IoT in the energy sector include IoT in power distribution, equipment monitoring, mobile workforce management, field monitoring, and IoT in energy management. The use of IoT in the industrial sector includes the fuel sector (oil, coal), the power sector and IoT in the gas and oil sectors.

How to manage data sharing among components of an IoT-enabled energy system?

Solutions are thus needed to manage data sharing among components of an IoT-enabled energy system. To overcome this integration difficulty, one strategy is to construct a combined structure for the electricity system that takes into consideration the IoT requirement of each subsystem.

Why is energy harvesting important for IoT devices?

Concluding remarks Harvesting and storage of energy play an important role in the efficiency and lifetime of IoT devices. The central goal of energy harvesting systems for IoT is to move from battery-based devices to an autonomous energy harvesting system that relies on energy harvested from the ambient environment.

Does IoT consume a lot of energy?

IoT platforms are largely employed in energy systems to save energy, however, they consume a lot of energy to operate and transfer data from the numerous IoT devices involved. For IoT devices in the energy sector, this energy consumption poses a significant barrier. To overcome this obstacle, however, several strategies have been created.
