

Why are pre-stressed flexible cable-supported photovoltaic systems becoming more popular?

With the increasing adoption of mountainous photovoltaic installations, pre-stressed flexible cable-supported photovoltaic (PV) systems (FCSPSs) are becoming increasingly popular in large-scale solar power plants due to their evident adaptability to sloping terrain. The wind-induced deformation of FCSPSs significantly influences the wind field.

What is a flexible PV mounting structure?

**Flexible PV Mounting Structure Geometric Model** The constructed flexible PV support model consists of six spans, each with a span of 2 m. The spans are connected by struts, with the support cables having a height of 4.75 m, directly supporting the PV panels. The wind-resistant cables are 4 m high and are connected to the lower ends of the struts.

What is a flexible PV support structure?

The baseline, unreinforced flexible PV support structure is designated as F. The first reinforcement strategy involves increasing the diameter of the prestressed cables to 17.8 mm and 21.6 mm, respectively. These configurations are named F1-1 and F1-2 for ease of comparison.

What is a PV flexible system?

However, PV flexible system, formed by prestressed flexible cable structure is a large-span PV module support with spans of 10-40 m and has gained popularity in recent years. The modules can be installed 2-10 m above the ground, providing high headroom and reduced pile numbers.

What is the difference between a conventional and flexible PV system?

The conventional PV system involves installing photovoltaic modules on fixed ground supports, with a maximum span of 5 m. However, PV flexible system, formed by prestressed flexible cable structure is a large-span PV module support with spans of 10-40 m and has gained popularity in recent years.

How safe are flexible PV brackets under extreme operating conditions?

**Safety Analysis under Extreme Operating Conditions** For flexible PV brackets, the allowable deflection value adopted in current engineering practice is 1/100 of the span length. To ensure the safety of PV modules under extreme static conditions, a detailed analysis of a series of extreme scenarios will be conducted.

Specifically, the flexible photovoltaic bracket can be customized according to the shape and size of the roof, and is suitable for various types of roofs, such as flat roofs, pitched roofs, corrugated roofs, etc.; at the same time, it can also be adjusted according to the unevenness of the ground, suitable for various types of ground, such as ...

At present, Guangxiang flexible photovoltaic support can achieve a large span of 35-50m on flat ground. For special situations, it can achieve a span of more than 60m and a height of more than 9m. Laying solar panels in desert areas can directly utilize the abundant solar energy resources in desert areas for power generation, while improving the surface environment ...

With the rapid development of the photovoltaic industry, flexible photovoltaic supports are increasingly widely used. Parameters such as the deflection, span, and cross-sectional dimensions of cables are important factors affecting their mechanical and economic performance. Therefore, in order to reduce steel consumption and cost and improve ...

The pre-stressed flexible cable-supported photovoltaic (PV) systems (FCSPSs) are gradually becoming the preferred PV structure for large-span and mountain photovoltaic power plants. The wind-induced response of FCSPSs under negative wind conditions is more pronounced than under positive wind conditions.

The invention discloses an arch-supported flexible photovoltaic support structure, and a flexible photovoltaic support system comprises: the foundation structure is used as a supporting foundation of the whole flexible photovoltaic support structure; the prestressed cable structure comprises a plurality of rows of flexible bearing cable units transversely fixed on the upper part ...

Semantic Scholar extracted view of "Experimental study on critical wind velocity of a 33-meter-span flexible photovoltaic support structure and its mitigation" by Jiaqi Liu et al. ... Experimental investigation on wind loads and wind-induced responses of large-span flexible photovoltaic support structure. Yi ... This article investigates a ...

Du Hang, Xu Haiwei, Yue long, et al. Wind pressure characteristics and wind vibration response of long-span flexible photovoltaic support structure [J] Journal of Harbin Institute of Technology ...

The structure type of flexible support for large-span prestressed suspension cable includes the key parts such as load bearing, component cable, cable truss interstrut, pile, side anchor ...

A three-dimensional explicit dynamics model of the flexible PV support array considering inter-row cables and inter-span rods is established, and the wind-induced dynamic ...

To fit in these areas, a cable-supported photovoltaic (PV) system (Fig. 1) has received increasing attention due to its large span, good terrain adaptability, and spatial compatibility. It can be used in fishing grounds, hilly areas, tidal areas, etc., where a traditional beam-supported structure is difficult to apply.

8 types of foundations commonly used in photovoltaic brackets. A reasonable form of photovoltaic support can improve the system's ability to resist wind and snow loads, and the reasonable use of the characteristics of the photovoltaic support system in terms of bearing capacity can further optimize its size parameters, save

materials, and contribute to the further ...

Photovoltaic (PV) system is an essential part in renewable energy development, which exhibits huge market demand. In comparison with traditional rigid-supported photovoltaic (PV) system, the flexible photovoltaic (PV) system structure is much more vulnerable to wind load. Hence, it is imperative to gain a better understanding of the aerodynamic characteristics and ...

the flexible photovoltaic support is low. The horizontal stability and pile length of the pile foundation should be considered according to the embedded stability of the cantilever retaining structure. This flexible bracket structure system greatly improves the span length of photovoltaic brackets, allowing for

As the global energy depletion problem becomes more and more serious, solar energy, as a renewable green energy, accounts for an increasingly high proportion in my country's energy structure, and photovoltaic power generation projects are developing more and more rapidly. Since traditional ground-based rigid photovoltaic supports have certain site restrictions, ...

Cable-supported photovoltaic systems (CSPSs) are a new technology for supporting structures that have broad application prospects owing to their cost-effectiveness, light weight, large span, high ...

However, due to the small stiffness, light weight and large span of flexible components, the wind effect is obvious, so the key problem is the wind resistance design. ... a long-span flexible photovoltaic support structure composed of the ...
