

Price of photovoltaic bracket for foreign trade export

How does international trade affect solar PV technology?

Consequently, the increase in the global supply of solar PV panels, which exceeds the global demand, lowers the final price for such products in all global markets. This finding suggests that international trade could lead to further price reductions, thus fostering the development and deployment of solar PV technology.

What are China's solar PV exports?

In 2021, the value of China's solar PV exports was over USD 30 billion, almost 7% of China's trade surplus over the last five years. In addition, Chinese investments in Malaysia and Viet Nam also made these countries major exporters of PV products, accounting for around 10% and 5% respectively of their trade surpluses since 2017.

What was the EU export value of solar panels in 2023?

The EU import values of solar panels and liquid biofuels in 2023 were much higher than the corresponding EU export values which were EUR0.9 billion for solar panels and EUR2.2 billion for liquid biofuels. By contrast, the EU export value of wind turbines in 2023 (EUR2.0 billion) was much higher than the corresponding value for imports.

Does a 1% increase in imports affect solar PV module prices?

However, the coefficient in absolute value is lower than unity, meaning that the model satisfies the stability condition. The empirical analysis reveals that a 1% increase in imports of solar PV cells and modules is associated with a 0.1% decline in solar PV module prices on average, all other things being equal.

What happens if new countries join the global solar PV market?

When new countries join the global solar PV market, the total production capacity scales up, implying an increase of the global supply of solar PV panels, which exceeds the global demand and subsequently lowers the final price for such products in all global markets (Kirkegaard et al., 2010).

Do crude oil import prices affect solar PV module prices?

Finally, crude oil import price increases have a positive influence on solar PV module prices. This finding could be explained on the grounds that higher imported oil prices can lead to an increase in demand for solar PV panels through the substitution effect.
