The development of large-scale energy storage systems and portable electronic products have critically triggered numerous research in the field of rechargeable energy storage devices, which not only are highly safe and desirable but also have high flexibility and long service life [1, 2].Lithium-ion batteries (LIBs) have dominated the market of energy storage devices ...

More importantly, a novel flexible quasi-solid-state sodium-ion full battery (QSFB) is feasibly assembled by sandwiching a P(VDF-HFP)-NaClO<sub>4</sub> gel-polymer electrolyte film between the advanced NVPOF@FCC cathode and FCC anode. ... And the QSFBs are further evaluated in flexible pouch cells, which not only demonstrates excellent energy-storage ...

Lithium-sulfur (Li-S) batteries are a promising option for energy storage due to their theoretical high energy density and the use of abundant, low-cost sulfur cathodes. Nevertheless, several obstacles remain, including the dissolution of lithium polysulfides (LiPS) into the electrolyte and a restricted operational temperature range. This manuscript presents a ...

As a consequence, the as-designed Al-air battery with quasi-solid-state electrolyte delivered ultra-high mass-specific capacity of 2765 mAh g<sup>-1</sup> under a current density of 6 mA cm<sup>-2</sup> and achieved the highest energy density of 4.56 KWh kg<sup>-1</sup>, 7.24 times higher than that with blank electrolyte. This facile and cost-efficient quasi-solid ...

By using solid-state electrolytes (SSE) instead of traditional organic liquid electrolytes, solid-state LMBs are considered to be the most promising energy storage method. SSEs can suppress Li

Because of the high ionic conductivity (0.55 mS.cm<sup>-1</sup> at 25 oC), wide electrochemical window (>4.5 V vs. Li<sup>+</sup>/Li), and high Cu ion solubility of solid-state sandwich electrolyte, a solid-state ...

An intermediate temperature garnet-type solid electrolyte-based molten lithium battery for grid energy storage. Nat. Energy, 3 (2018), pp. 732-738, 10.1038/s41560-018-0198-9. ... Towards wearable electronic devices: A

Rapid progress in electric vehicles and large-scale energy storage systems calls for the development of a new battery technology, as the current Li-ion batteries exhibit limited energy density [[1], [2], [3]] and have safety concerns [[4], [5], [6]] by using a graphite anode and a flammable organic electrolyte. An attractive route to increase energy density is to replace the ...

We designed a quasi-solid-state magnesium-ion battery (QSMB) that confines the hydrogen bond network for true multivalent metal ion storage. The QSMB demonstrates an energy density of  $264 \text{ Wh kg}^{-1}$ , nearly five times higher than aqueous Mg-ion batteries and a voltage plateau (2.6 to 2.0 V), outperforming other Mg-ion batteries.

This perspective points out the potential of solid-state Na-air/O<sub>2</sub> batteries for powering next-generation storage devices, highlighting their high energy density, efficiency, ...

A quasi-solid-state GPE is constructed for stable dual-ion sodium metal battery. The GPE shows high oxidative resistance and forms protective interfacial layers. The GPE network facilitates uniform cation plating and anion intercalation. The sodium battery shows excellent cycling performance with high energy density. Xu et al., Chem 6, 902-918

Quasi-Solid-State Dual-Ion Sodium Metal Batteries for Low-Cost Energy Storage. ... grid-connected stationary energy storage) via lithium-ion batteries are not viable economically. 2, 3, 4 As a result, rechargeable sodium (Na) ... A stable quasi-solid-state sodium-sulfur battery. Angew. Chem. Int. Ed. Engl., 57 (2018), pp. 10168-10172.

Our printable quasi-solid-state electrolytes exhibited exceptional printability without loss of ionic conductivity that can be a promising solution to address the aforementioned issues. As a proof of concept, we demonstrated two quasi-solid-state GPEs, LiPF<sub>6</sub>-GPEs, and LiTFSI-GPEs. The composition of the GPEs was systematically determined to ...

Developing a high-performance, low-cost, and safer rechargeable battery is a primary challenge in next-generation electrochemical energy storage. In this work, a quasi-solid-state (QSS) sodium-ion full battery (SIFB) is designed and fabricated. Hard carbon cloth derived from cotton cloth and Na<sub>3</sub>V<sub>2</sub>(PO<sub>4</sub>)<sub>2</sub>O<sub>2</sub>F (NVPOF) are employed as the anode and the cathode, respectively, and a ...
