

Just 6 years ago, only 0.34 GW of non-pumped hydro storage energy storage could be found worldwide. In 2017, energy storage installations increased nearly 50% over 2016, close to 6 GW of capacity. The bulk of this explosive growth is from battery energy storage systems (BESS) -- specifically, lithium-ion BESS.

The International Renewable Energy Agency predicts that with current national policies, targets and energy plans, global renewable energy shares are expected to reach 36% and 3400 GWh of stationary energy storage by 2050. However, IRENA Energy Transformation Scenario forecasts that these targets should be at 61% and 9000 GWh to achieve net zero ...

The transition away from fossil fuels due to their environmental impact has prompted the integration of renewable energy sources, particularly wind and solar, into the main grid. However, the intermittent nature of these renewables and the potential for overgeneration pose significant challenges. Battery energy storage systems (BESS) emerge as a solution to balance supply ...
