

Solar Power Inverter Instructions

How do you connect a solar inverter?

Connect the solar panel cables to the positive (red) and the negative (black) PV terminals. Secure the PV connections tightly. A tight connection will reduce the contact resistance as much as possible. Do not connect a battery or DC Power supply to the Solar connection. This will cause damage to the inverter. 3.2.3. AC output connection

How does a SolarEdge inverter work?

The SolarEdge inverter efficiently converts DC power from the modules into AC power that can be fed into the main AC service of the site and from there to the grid. The inverter also receives the monitoring data from each power optimizer and transmits it to a central server (the SolarEdge monitoring portal; requires Internet connection).

How do I set up my inverter?

Menus may vary in your application depending on your system type. During first time installation: Upon activation completion, in the SetApp, tap Start Commissioning. If not already ON - turn ON AC to the inverter by turning ON the circuit breaker on the main distribution panel.

How far can a SolarEdge inverter be installed?

SolarEdge inverters and power optimizers can be installed at a minimum distance of 50 m/164 ft from the shoreline of an ocean or other saline environment, as long as there are no direct salt water splashes on the inverter or power optimizer. ATTENTION!

How do I seal my inverter?

For proper sealing, first tighten the corner screws and then the two central screws. Turn ON the AC/DC Safety Switch. If an additional external DC switch is installed between the power optimizers and the inverter(s) then turn it ON. P_OK: Appears only upon first telemetry reception from the power optimizers.
