The answer is yes, you can replace a solar light bulb, even with a traditional incandescent bulb. However, there are a few things you should keep in mind: First, solar light bulbs use less energy than their traditional counterparts. That means you will need to use more electricity to achieve the same level of lighting.

A lamp holder is used to secure the bulb in a fitting, a fundamental element of most fixtures which also provides the circuit connection to ensure reliable power. Also referred to as a light bulb holder, they are available in various types according to the application requirements.

For example, take a look at the lamp holders that start with a single letter E, this is in reference to the Edison screw fitting, named after Thomas Edison, who is widely documented as the inventor of the practical electric light bulb. Following the E is a number, this is in reference to the width of the cap in millimetres.
