Static Voltage regulators are SMPS based which makes use of IGBT. Static Voltage Stabilizer is a brand new generation of voltage stabilizers based on PWM (Pulse Width Modulation technique). Those Static Voltage Stabilizers have a completely high accuracy and the voltage stabilization is inside $\pm 1\%$.

An oil-cooled stabilizer is a type of voltage stabilizer that offers full protection against short circuits, overload, voltage fluctuations and phase corrections. These stabilizers are perfect for high-capacity mechanisms and use oil as a cooling medium to dissipate heat that is generated during the voltage regulation process.

A power system stabilizer (PSS) is a control system installed on a generation unit that monitors variables such as current, voltage, and shaft speed. When necessary, it then sends the appropriate control signals to the voltage regulator to damp system oscillations so that frequency does not stray beyond tolerances.. Voltage is controlled by the field current provided to the ...

Solar photovoltaic (PV) generation is one of the fastest growing renewable energy sources (RESs) in the world, with an annual growth rate of 24% between 2010 and 2017 [1] particular, large-scale solar-photovoltaic (PV) generation systems (e.g., >10 MW) are becoming very popular in power grids around the world [1]. This will displace a significant share of the ...

Other times the mains voltage reaches levels that exceed the foreseen rated value by 15, 20 or even 30%. Increasingly, there is a reduction in the Power Quality level of the electrical energy made available to the end user. voltage ...
