How does a solar PV meter work?

It is able to measure the energy &quot;to grid&quot; or &quot;from grid&quot; by only one meter. The meter can upload the measurement (Voltage, Current, Active Power, Active Energy, Frequency...) to the cloud. So you can easily monitor the below KPIs of a solar PV system online:

How to monitor a single phase solar PV system?

If you want to monitor your single phase solar PV system, you can have two options to realize. Install 2PCS single phase WiFi energy meters (WEM3080) in a solar PV system; Install 1PCS three phase WiFi energy meters (WEM3080T) in a solar PV system (recommended)

Where should a solar generation meter be located?

The generation meter should be located between the inverter and SolShare. The AC isolator (the single point of isolation for the entire solar system) should be located between the inverter and the SolShare. The location of this should be detailed in the site pack for safety of isolation.

How do I connect a solar meter to an inverter?

The meter is connected to an RS485 port of one of the inverters. If the inverter has a second RS485 port, use this port to connect between the inverters. If the inverter has only one RS485 port, use an RS485 Plug-In (available from SolarEdge) or ZigBee communication between the inverters.

What is a SolarEdge energy meter with Modbus connection?

The SolarEdge Energy Meter with Modbus Connection (also referred to as "the meter") enables measuring the power and energy of the photovoltaic (PV) system. The meter supports both single-phase and three-phase grids, and requires the installation of Current Transformers (CTs). The CTs are available from SolarEdge:

What is a SolarEdge meter?

Denotes information about safety issues. The SolarEdge meter enables measuring the power and energy of the photovoltaic (PV) system. The meter is used by the inverter for the following applications:
