

State Grid Red Leader Micro Party Class

Why do Grid members have a formal link to the party-state?

The formal link to the party-state is important because grid members are bound to it through the contract system. Thus, they are neither public servants nor attached to a work unit. This is despite being assessed in the same way as a civil servant.

How does the grid system achieve social stability?

Hence, the grid system primarily aims at achieving social stability at the grass roots. It does that, as Tang noted, by pooling resources and integrating various actors.⁹ The grid system therefore combines horizontal and vertical linkages across departments and along the party-state hierarchy.

How important are political requirements for aspiring Grid members?

Political requirements are highly important for aspiring grid members, and these play a role in 57 notices. Indeed, of the 88 notices, 37 directly mention the Chinese Communist Party in tandem with protecting its 'leadership'. To this, others add the requirement to protect the party's 'line', 'guiding principles', or 'policies'.

Is the grid system a form of state-society relations?

Third, the grid system therefore is also an embodiment of state-society relations, wedged between the people and the party-state hierarchy. Exploring the grid system then provides insights regarding the potential for citizen self-governance and public participation.

Do Grid members need to join a party?

Hence, the majority of positions advertised for grid members comes with specific political requirements. Even though there is no requirement to join the party or be a party member, these requirements nevertheless ensure that grid members are part of a political and administrative hierarchy.

Why are locals a better fit for the grid?

Unlike people from the outside, locals have advantages in communicating, blending in, and socializing with citizens - which aid service provision and social control. Moreover, they likely have a better understanding of the problems and issues within their own city. This makes them a better fit for anticipating incidents within the grid.

The nationwide activation of grassroots governance organizations alongside the quasi-compulsory adoption of digital monitoring and reporting enabled a rapidly scalable expansion of the party-state's capacities ...
