The first example is measuring the power consumption of some appliances that may be used with a solar generator during a 3-hour power outage. Appliance/Consumption Running Watts Run Time Total Watt-Hours Used; Refrigerator: 90W: 3 hours: 270Wh: Microwave: 1,000W: 10 min (0.17 hrs) 170Wh: Lighting: 100W: 3 hours: 300Wh:

The TES system can hold enough heat energy to meet cooking needs for three days. Long-term cost savings are provided by the solar cooking stove, even though the initial investment is marginally higher than that of an LPG stove. The solar cooking stove with a TES system is expected to cost Rs. 25 000, but it will pay for itself in 2-3 years.

Size of Solar Panel = Electric Stove Power Usage . If you have a 2,000-watt stove, you will need a 2,000-watt solar panel array to power it. Any combination of solar panels will suffice as long as the total power generated is ...
