

Can energy storage be a strategic investment under competition?

These market dynamics serve as a motivation for this study to understand strategic investments in energy storage under competition, taking into account storage impact on the market price. Our work uses energy arbitrage as a test case with the intent to explore additional services in the future.

Do storage investors compete in deregulated electricity markets?

In practice, storage investors usually compete in deregulated electricity markets in a non-cooperative manner, a setting that is more challenging to model and analyze. Qin et al. studied strategic storage investment among non-cooperative investors. This work is most closely related to ours. Our work differs from in several crucial ways.

How to make energy storage bankable?

Stacking of payments is the most common way to make the business model for energy storage bankable whilst optimizing services to the grid. In its simplest version it contains: Let the best technology provide the service(s) the grid needs. Thinking of technology first could do the grid a disservice. I o n e p r o j e c t s ? I t d e p e n d s

Should investors invest in energy storage technology?

For those who decide to invest, limited and declining revenue prospects could lead to competing strategies of energy storage investment and operation, where investors opt for technologies with specific technical attributes in the competitive market.

Can multiple energy storage investors invest in heterogeneous storage technologies?

Our work studies the strategic investment behavior among multiple energy storage investors in CAISO. These investors can choose to invest in heterogeneous storage technologies. At the beginning of an investment horizon, each investor decides the invested energy and power capacities.

What happens if investors neglect the storage impact?

If investors neglect the storage impact on the market price, the profit of storage can be significantly overestimated and it leads to a profit loss, especially when the storage capacity is large. 5.3. Market potential: Impact of renewable energy
