The world is set to add as much renewable power over 2022-2027 as it did in the past 20, according to the International Energy Agency. This is making energy storage increasingly important, as renewable energy cannot provide steady and interrupted flows of electricity. Here are four innovative ways we can store renewable energy without batteries.

These are the panels you've seen on rooftops or in fields. When the sun shines onto a solar panel, photons from the sunlight are absorbed by the cells in the panel, which creates an electric field across the layers and causes electricity to flow. Learn more about how PV works. The second technology is concentrating solar power, or CSP.
