

The latest news on lithium battery energy storage

Are lithium-ion batteries good for stationary storage?

But demand for electricity storage is growing as more renewable power is installed, since major renewable power sources like wind and solar are variable, and batteries can help store energy for when it's needed. Lithium-ion batteries aren't ideal for stationary storage, even though they're commonly used for it today.

Could artificial intelligence reduce lithium use in batteries?

A brand new substance, which could reduce lithium use in batteries, has been discovered using artificial intelligence (AI) and supercomputing. The findings were made by Microsoft and the Pacific Northwest National Laboratory (PNNL), which is part of the US Department of Energy.

How will lithium-ion batteries change the world?

It is also expected that demand for lithium-ion batteries will increase up to tenfold by 2030, according to the US Department for Energy, so manufacturers are constantly building battery plants to keep up. Lithium mining can be controversial as it can take several years to develop and has a considerable impact on the environment.

Why are lithium-ion batteries so popular?

But the dominance of lithium-ion batteries is partly due to their status as the reigning technology. We know how to make lithium-ion batteries really well because they got developed for personal electronic devices decades ago. So now they're getting incorporated into new applications, like EVs and even grid storage.

How many times can a lithium battery be charged?

Researchers from the Harvard John A. Paulson School of Engineering and Applied Sciences (SEAS) have developed a new lithium metal battery that can be charged and discharged at least 6,000 times-- more than any other pouch battery cell -- and can be recharged in a matter of minutes.

Are lithium-ion batteries worth it?

Lithium-ion batteries make an appearance in everything from phones and laptops to EVs and even massive installations at data centers or on the grid. And fair enough. These batteries can pack a lot of energy into a relatively small space, they charge and discharge pretty quickly, and they're getting cheap.
