Oregon) have established energy storage targets or mandates. California adopted the first energy storage mandate in the USA when, in 2013, the California Public Utilities Commission set an energy storage procurement target of 1.325 GW by 2020. Since then, energy storage targets, mandates, and goals have been established in Massachusetts,

accordingly set the cooling system (air cooling or liquid cooling) parameters of the BESS. This also creates a difference in the energy consumption by the cooling system to maintain the ideal temperature. The amount of energy consumed by the cooling system matters when the energy is supplied by the BESS (during the discharging and rest period).
